

Amendments to the Claims:

This Listing of Claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

Claims 1-16 (canceled).

17. (new) A method of supplying data comprising:
receiving user data sent from a first terminal which user data contains image data, position data, and time data regarding when the image data was acquired;
creating compound data by combining the user data with map data and stored data; and
sending the compound data to a second terminal on which this compound data can be displayed.

18. (new) A method of supplying data comprising:
receiving user data sent from a first terminal which user data contains image data, position data, and time data regarding when the image data was acquired;
receiving stored data from a first database;
creating compound data by combining the user data and the stored data with map data;
sending the compound data to a second terminal on which this compound data can be displayed; and
determining a fee for the compound data to charge to a distributor of the stored data, a user of the first terminal, or a user of the second terminal.

19. (new) The method according to claim 18 wherein the second terminal can access the first database when the compound data is received.

20. (new) A method of supplying data comprising:

receiving user data sent from a movable first terminal, the user data including image data, position data, and time data regarding the image data;
receiving map data and stored data;
temporarily storing the received data;
creating compound data by combining the user data, the stored data, and the map data;
supplying the compound data to a second terminal; and
calculating a charge for the method of supplying data.

21. (new) A data supplying apparatus comprising:

a storage device that stores user data sent from a first terminal which user data contains image data, position data, and time data regarding when the image data was acquired, the storage device also storing map data and other stored data; and
a combining unit that creates compound data by combining the user data, the stored data, and the map data; and
a sending unit for sending the compound data to a second terminal.

22. (new) A data supplying apparatus comprising:

a storage device that stores user data sent from a first terminal, which user data contains image data, position data, and time data regarding when the image data was acquired, together with map data and other stored data;
a combining unit coupled to the storage device for creating compound data by combining the user data, the stored data, and the map data;
a supplying apparatus that supplies the compound data to a second terminal for display thereon; and
a charging unit that calculates a fee for the compound data.

23. (new) The data supplying apparatus according to claim 21 wherein the combining unit displays an image pointer based on image data and a further pointer based on stored data on the map data.

24. (new) The data supplying apparatus according to claim 22, wherein the combining unit displays an image pointer based on image data and a further pointer based on stored data on the map data.

25. (new) The data supplying apparatus according to claim 21 wherein the storage device stores user data in relation to a user ID.

26. (new) The data supplying apparatus according to claim 22, wherein the storage device stores user data in relation to a user ID.

27. (new) The data supplying apparatus according to claim 21, wherein the combining unit retrieves the map data from a database.

28. (new) The data supplying apparatus according to claim 22, wherein the combining unit retrieves the map data from a database.
